A shelter is one of the basic needs that everybody in the world must have. [FORM Design Collaborative](#) has created the Woodland [Canopy](#), an [eco-friendly shelter](#) that has floor platforms that are made of locally obtained and FSC certified or reclaimed lumber. It also has a ribbed structure that is constructed using an unprocessed [bamboo canes lashed](#) together with hemp rope. In addition, the woodland canopy is constructed for sustainable materials and it has [low impact connection](#) to the site for an easy removal of the structure if desired. With the great features of the Woodland Canopy, I find it perfect for a weekend overnight outing or can be a temporary shelter for survival if needed.
